

User login:

1. User login: I need to have changed the colours of the text:
 - a. Total Devices = Dark blue
 - b. Updated Devices = Green

2. User login: the color of these need to be green. The percentage that is updated need to show green. Please change the brown color to Green.

3. User login: From number 5 the order needs to be, please change the order just like here and rename the fields;

- (5) IP-adres
- (6) Subnetmask
- (7) Standaard gateway
- (8) DNS Server
- (9) Alternative DNS server
- (10) DNS-achtervoegsellijst

4. Both login: Device information block. For the Cabled and mobile pinterminal it needs to have to following fields;

- 1. Name (ECR id)
- 2. Type
- 3. Terminal model
- 4. Serial number
- 5. Condition
- 6. Last updated
- 7. Software version
- 8. SIM-card (choice field: Local or Dutch)
- 9. Sim serial number

5. How to get a device in this state (status), that it shows that there need to be done an update and gets the yelow colour?

How to get a device on to this list?

6. Can you add the Startdate in to this screen?

 Activity

 Support Ticket >

 Manuals

9. User login: need a new page for instruction video's (I). When de instruction video's is made, admin will place these on this page. So admin needs to upload it, and user needs to see it. Video's need to be uploaded to the site (youtube is available for everyone, that's why it needs to be on the site memory).

10. User login: when looking at the location information, the field text are missing.

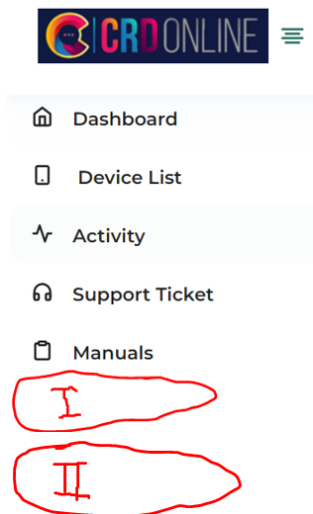

1. Location name
2. Location e-mail
3. Contact person
4. Phone number
5. Contact person 2
6. Phone number 2

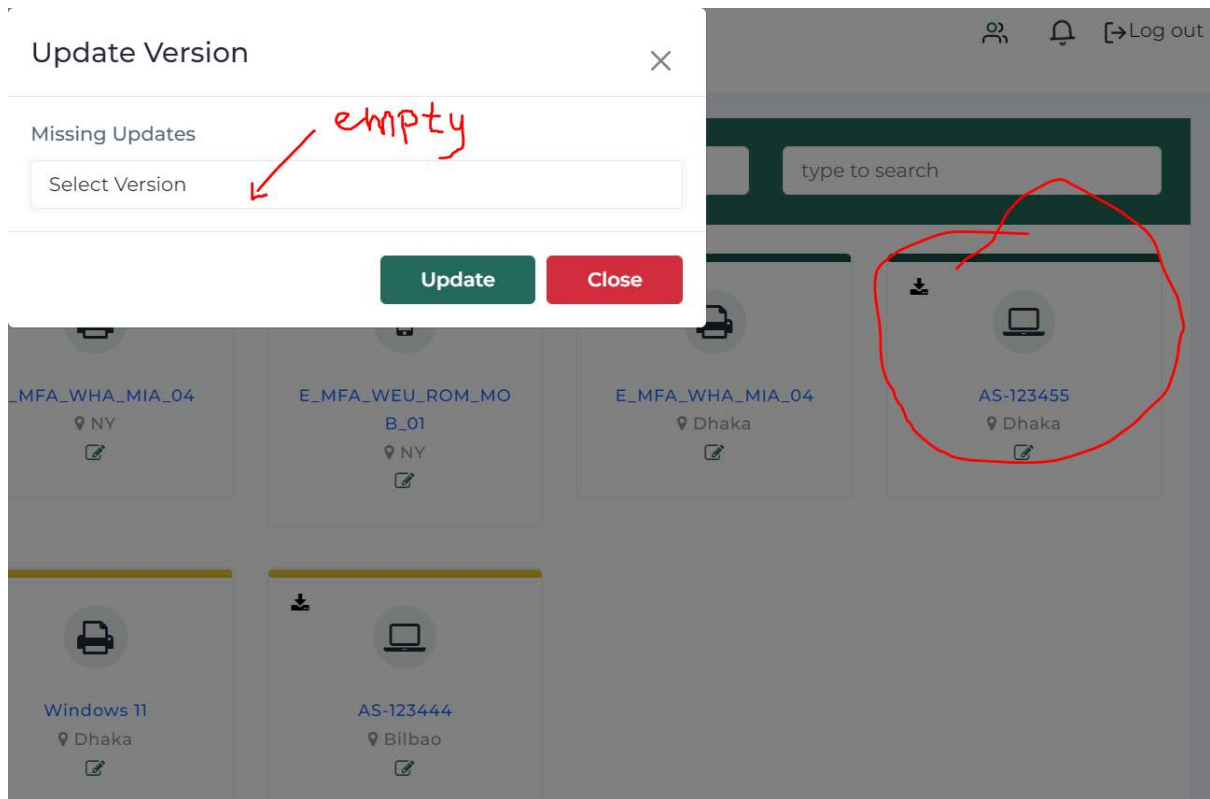

11. User login: New notification is showing now, and is clickable. But once clicked it disappears from the list new notification, that's fine. But Can there be a menu item: Notifications? So when clicked on the new notification at the top and after reading it, it is still readable in the menu item Notifications (in the menu)

See the menu item Notifications (II)

12. Admin login: how to add a update version to an existing devices? Let's say location A has 3 devices, 1 is updates and shown as update, 2 isn't updated this period. How can admin make these 2 devices as updated? For example: the device AS-123455 for location Dhaka. This one is updated for now in the device list. And isn't showing in the list "Not updated Devices". How can I change the status of this device. I need to change this in, not updated device. I can not manage to change the status.

13. If I look at the 2 devices: Dhaka Windows 11 and Bilbao AS-123444 then;

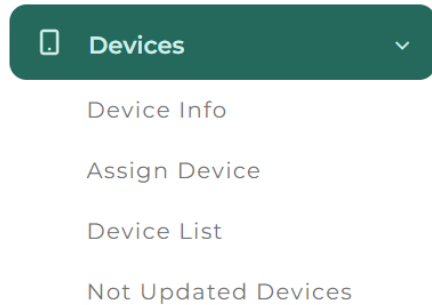

Dhaka Windows 11, shows as yellow (so it shows also in "NOT UPDATED DEVICES") and I can select a version to make this one update so it becomes green and don't shows anymore in the list "NOT UPDATED DEVICES").

Bilbao AS-123444, shows also as yellow (and also in the list "NOT UPDATED DEVICES"), but for this one there isn't a list with version available. So I can not select a version to make this one update. So how to get versions in the list with updates? With other words, how can I make this one updated again? By selecting a version that is available in the list?

14. The meaning of the version update was, that admin can fill-in/type in as admin a version for a type device. So it would be available for all the same type device. Not as individual version for all devices. But per device type. Let say for aanvraagstation, admin makes a new version in the backend. Then selects the type device. And all devices get automatically the status not updated. And admin will de-select/ or select the devices that are updated by hand. Based on information from supplier. Supplier sends a report with all devices information and status of

the version. Then admin, walks through the list, and sees which one is updated and change it as admin, so that the user can see which one is or which one isn't updated when they log in. Now it seems to work as, put a version per device. That's a lot of work for admin and not what I wanted/needed. Can this be changed?

15. Need information what to do in each menu item.

Device Info

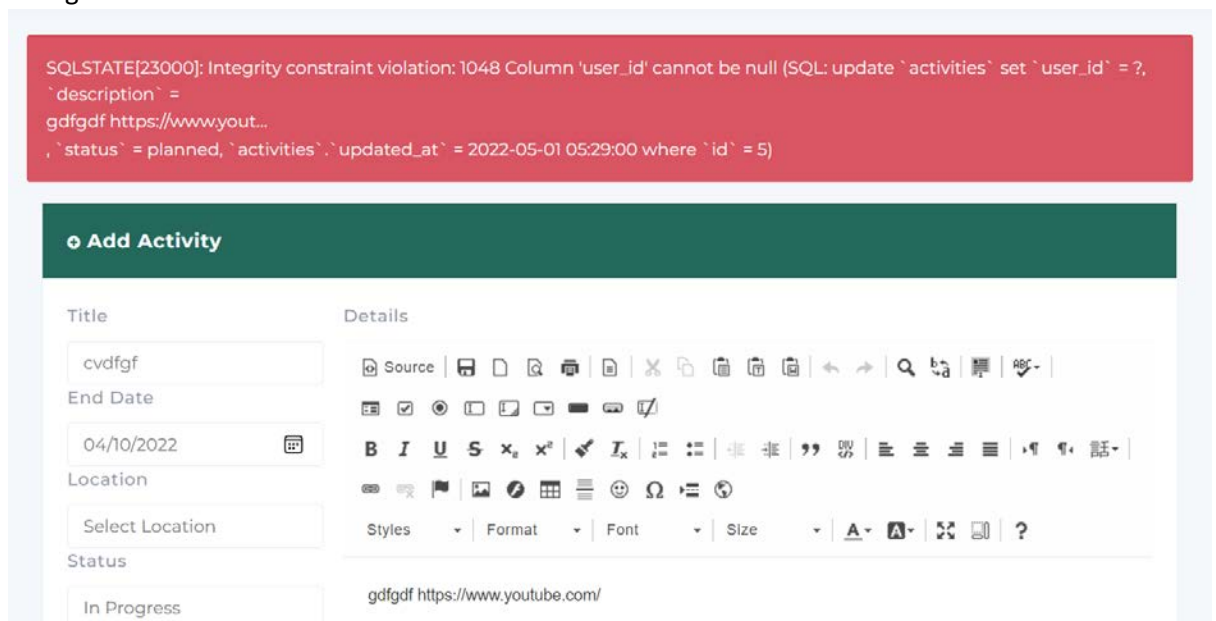

Assign Device

Device List

Not Updated Devices

16. Email functionality by admin will be tested if above is working correctly. Then I will put more data on the site, to test more specific.

17. When changing progress/ status of activity and want to save, it gives an error. Can not save changes.

18. When making an activity without a location, it gives an error. Both need to work. When selecting a location, then the activity is only for the location as it works like now. But when not selected a location, the activity need to be visible for all locations.

SQLSTATE[23000]: Integrity constraint violation: 1048 Column 'user_id' cannot be null (SQL: insert into `activities` (`title`, `user_id`, `description`, `end_date`, `status`, `updated_at`, `created_at`) values (Test, ?, ?, 2022-05-05, planned, 2022-05-01 05:34:14, 2022-05-01 05:34:14))

19. How to delete an activity when admin wants to clean-up the old activities?
20. The support tickets that's filled by the user, comes in the admin menu Support tickets. That's nice, so admin can see the tickets submitted by user. Can there be a status button, to mark the ticket as completed. And can the support tickets have a possibility to sent this to an emailadres? So when admin sees the support ticket, that admin can sent it to an email address with an subject? Or some-where in the back-end defined an emailadres where to send all these support tickets? Admin need the possibility to change this email adress in the backend when needed.
21. Notifications for admin. If possible can admin receive notification when ticket is submitted?
22. I still do not see the mobile version to ask "ADD TO HOMESCREEN" so it makes an icon on the homescreen of the phone. It's a part of the PWA. I already sent information about this by what's app. When user goes to the mobile version (we all use Iphone) then a question need to be asked, ADD TO HOMESCREEN. When user clicks on it, it then makes a icon on the homescreen, so it looks like an app. When user is logged in, they can click on the app icon to acces the website realtime. This is need for better user experience and better to get the notification on the screen. This is discussed and is promised to make. I do not see this.
23. User login mobile: user need to get the notification when not logged in. This is also discussed and is promised to make. I do not see this.
24. Where to change admin login?
25. In Fase II of this project. When fase 1 is finished I want to talk about the possibility to create different report. But that isn't a part of the job for now. But keep in mind for the future.

For now this are all my comments. I need you to reply per comment when finished. I will recheck all with the use of this document. So would be better to use this as a guidance.

Thanks!
Kenneth

ERRORS:

ERROR 1: When logging out:

ERROR 2: When editing a device and don't making any changes and want to cancel it, it gives an error:
